DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 3-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Nomura et al (US patent 5,446,365).

As per claim 3, Nomura et al (herein after Nomura) teach a device for supplying electricity to a motor vehicle comprising a chargeable battery (6); a voltage transformer (25) having a first end connected to said chargeable battery; a capacitor (21) for charging said battery connected to a second end of said voltage transformer wherein the maximum voltage of said capacitor has a value which is greater than a maximum voltage of said battery (col. 4, line 57+).

As per claim 4, Nomura teaches the capacitor being discharged until the voltage of said capacitor is equal to the value of the actual voltage of the battery (col. 4, lines 7-56).

As per claim 5, Nomura teaches a method for supplying electricity to a motor vehicle comprised the steps of providing a rechargeable battery (6) having a nominal voltage; providing an energy accumulator (21) having a maximum voltage which is substantially greater than said nominal voltage; discharging said energy accumulator until the voltage of said accumulator is substantially equal to said nominal battery voltage (col. 4, lines 7-56).

As per claim 6, Nomura teaches a battery recharging system for improving the service like of a rechargeable battery, said system comprising energy accumulator means (21) having a first nominal voltage greater than a maximum voltage of said battery (6); means (23) connected between said accumulator and said battery for discharging said energy accumulator by a voltage decreasing transformation until said first nominal voltage has been reduced to a voltage substantially equal to the maximum battery voltage (col. 4, lines 7-56).

3. Art of general nature has been cited for applicant's review.

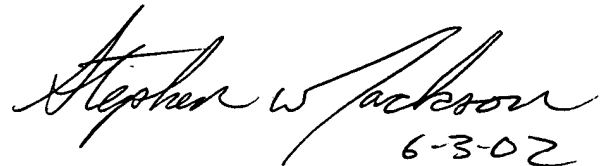

McEwan, Liu, Nomure et al, Severinsky, Winkler, Tsuchiya et al, Pacholok, Miller, Gerig, Camus et al, Leshner and Dennewitz et al teach a battery charging configuration, wherein a capacitor is used to charge the battery. Moreover, Yoshizaki, Piechnick, Maurer, Pappas et al, Washistrom, Kinoshita et al, Dildy, Jr., Saito et al, Desai et al, Furutani et al, Basso et al and Carter teach that batteries could be replaced by capacitors.

Response to Arguments

4. Applicant's arguments with respect to claims 3-6 have been considered but are moot in view of the new ground(s) of rejection.
